JOB PROTAL SYSTEM

INTRODUCTION

- What is a Job Portal System ?
- Why is it needed ?

PROBLEM STATEMENT

Finding a job or hiring the right candidate can be time-consuming and inefficient using traditional methods. Job seekers often struggle to find opportunities, and employers face difficulty reaching the right talent.

OUR SOLUTION

- Job seekers can create profiles, upload resumes, and apply for jobs.
- Providers can post job vacancies and search for suitable candidate.

OBJECTIVES

- To simplify the hiring process
- To make job searching easier
- To reduce paperwork and manual efforts.

FEATURES OF THE SYSTEM

- User registration and login
- Resume upload and job application
- Job search and filtering by category or location
- Provider dashboard for posting and managing jobs.

USER ROLES

1. Job Seekers
2. Job Provider
3. Admin(to manage the platform)

TECHNOLOGIES USED

- Frontend: HTML, CSS, Javascript
- Backend: PHP/Node.js/ Python(choose your actual tech)
- Database: MySQL/MongoDB
- Hosting: Localhost or cloud platform (if used)

CONCLUSION

"The Job Portal System is an effective solution for modern recruitment needs, helping both employers and job seekers to connect efficiently and easily."

THANK YOU
